Whitening Options

We are pleased to offer a variety of whitening options to meet your individual needs and preferences. Each method is safe and effective, with the most common side effect being slight temporary cold sensitivity. You can choose between any of the following options:

In-Office Power Bleaching\$420

The quickest way to whiten, in-office bleaching uses a powerful bleaching gel applied in a controlled environment in one appointment. Also includes custom-fit take-home trays for future touch-ups.

At-Home Bleaching.....\$250

The most controlled method, at-home bleaching involves whitening gel placed into thin plastic trays that are custom-fit to your teeth. You choose the gel and control how often and how long you bleach to get the exact effect that you desire.

Gel Options:

- 35% -- The strongest take-home gel available, it is only used for 30 minutes a day.
- 22% -- Used for 1-2 hours each day. Can be used overnight if desired.
- 10% -- Great for patients with highly sensitive teeth.

Ready-to-Go Bleaching.....\$75

Our most affordable option, Tréswhite requires no impressions and is a professional-strength alternative to over-the-counter whitening products.

Refill Gel\$45

Any of the above gels are available for purchase to use in your custom trays for touch-ups or additional whitening.

Whichever option you choose, you can rest assured that our office is here to provide support and to answer all of your questions.
